# Rethinking Roof Construction

**smartroof**®

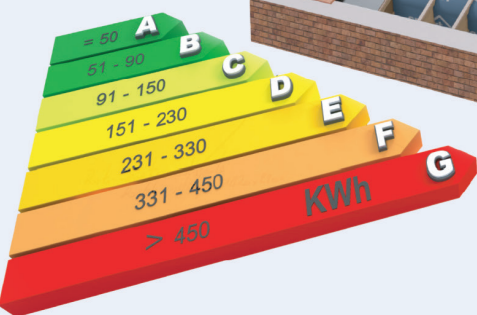

**At Smartroof we have a passion  
for delivering innovative roofing solutions.**

We understand the unique challenges facing the construction industry and our experienced team have developed a 'room in roof' insulated panel system that reduces overall build time, addresses the issue of skill shortages onsite and improves health and safety during the construction process.

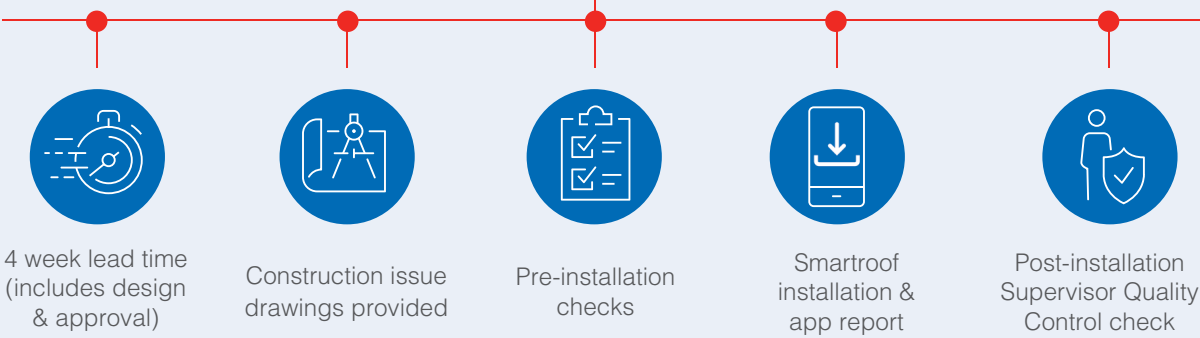

With our depth of knowledge and experience in 'room in roof' construction our technical and installation team will take your project from concept to site with maximum attention to detail at every stage of the process.

**Evolving Industry, Same Reliable Solution**

For housebuilders, all new housing by 2025 will be expected to produce 75-80% less carbon emissions compared to current standards. Smartroof's offsite modular roof system is already 2025 compliant and one of the most cost effective ways for housebuilders to address thermal bridging at junction details with the roof build-up.

**Process**

**System Benefits**

- Health & Safety**  
Safer working environment with reduced time spent at height. No gables/party walls/blockwork.
- Cost certainty**  
Less expensive than traditional methods of construction.
- Consistent quality**  
Manufactured in a factory governed by strict quality control procedures.
- Speed of construction**  
A pair of roofs completed in one day by our experienced installation team.
